Subject: RE: IOAA Weekly Tuesday Calendar Meeting Read Out

Moss as an environmental sensor started as an air issue. It's related to an issue in Portland, OR, where the U.S. Forest Service found contaminated moss. The primary contaminant in the moss was cadmium, but elevated arsenic was also found in later testing. Glass factories and a rail yard were the suspected sources.

There are quite a few articles online about it. I've copied a link to one from Oregon Public Broadcasting; I also read one in March in the New York Times. The Oregon Public Broadcasting article is from February; there may be more current information available.

The meeting for Tom Burke has been rescheduled numerous times. It will be amazing if it actually happens.
